IN THE SPECIFICATION:

At page 10, first full paragraph, beginning at the 2<sup>nd</sup> sentence and continuing to the end of the paragraph, delete all and replace it with the following:

-- Alternatively, and referring to FIGURES 13-16, the distal end of each cylinder rod 75 may be located within receiver 130 and secured via pin 140, which may be retained by hold-down wire 141. Pin 140 is received within apertures 145 of receiver 130 while pin 55, passing through plate 60 and bushing 74, may also pass through aperture 143 of receiver 130 (see FIGURES 13 and 16). In this manner, while cylinder rod movement drives the L-arm action similar to the embodiment shown in FIGURES 1-12, it will be appreciated that removal of two pins (pins 55 and 140) will enable quick disassembly of the unit. It will also be understood that other attachment mechanisms may be provided, while retaining the quick-connect/disconnect features of the present invention which allow the receiver/L-arm unit to be rapidly assembled and disassembled from the cross bar in the field. --
